

## Introducing MCL.IN

With the growth of our IP services, mcl.in has designed a special website specifically for their IP services – [www.mcl.IN](http://www.mcl.IN).

The new website would provide complete details on the IP services offered by MCL. Besides it would also have an extensive blog which will focus on IP related news and our opinion on them.

The new website also features a download section and provides free sample reports and brochures of our services for registered users.

MCL has been providing IP services for the past three years. During this time, MCL has analyzed thousands of patents on computing technology. MCL.IN provides services on Patent Analysis, Prior Art Search, Patent Landscaping and Mapping, Patent Drafting and Patent Monetizing.

MCL.IN are computing technology specialists. We leverage our 25 years of experience in the development of software and technology products for the analysis of patents and intellectual property.

MCL.IN team of technical experts and analysts have at least a BS in computer science or electronic engineering and at least 10 years of work experience. Most have a masters degree and a few PhDs. We provide expert advice on all computing intellectual property matters, litigation support, patent valuation, prior art search, infringement studies and patent landscape mapping.

MCL.IN employs a unique methodology to ensure the report delivered to a client is accurate. Once the technical team prepares a report on any of our IP services, it is reviewed by a reviewing team. A meeting of the technical and the reviewing team ensures that the report is accurate and covers all aspects of the invention.

Our mission is to provide truthful analysis of a computing patent at a price lower than anyone else. We believe in giving our clients more value for their money.

Our core competencies and experience are on the following areas of computing technology.

Computing Patents  
Mobile applications  
Telephony  
ECommerce, payment processing, NFC  
CRM, Enterprise software solutions  
Television, SetTop Box, advertising solutions  
Digital rights management  
Distributed and cloud computing architectures  
RFID  
Data and network security  
Desktop, Web applications  
Audio, Video, Image and Vertical Searches  
Gaming Machines, Online Games, Virtual Reality
